

# *Adolescent Screenings*

Hello Caregivers,

Pediatric Care of Ogden is excited to announce that we are beginning to provide an integrated care model to enhance the health of our patients. In addition to providing the same level of excellent primary health care we have always provided, we are now providing mental health care services. This allows our clinic to provide comprehensive care to our families in order to help them reach their optimal health.

As some of you have already noticed, the clinic has begun screening health and developmental milestones through the Ages and Stages Questionnaires. We will additionally be screening for mental health difficulties through the PHQ-4 on-line screening questionnaire. These screenings allow our primary care providers to gain important information prior to your well-child appointments to ensure that concerns (physical, developmental, emotional, and behavioral) can be identified and addressed during the appointment.

Sincerely,

Pediatric Care of Ogden
